KentuckyOne Health®

**Physician
Performance
Dashboard**

QUICK START

An easy guide to help you get started

WHAT DOES IT DO?

Overview

KentuckyOne Health Partners Physician Performance Dashboard allows you to measure and analyze your performance. You can determine your compliance with defined performance standards. By doing so, you can ensure you are performing in accordance with desired guidelines and identify those areas in which you would like to improve.

What You Need to Know

Measures

Performance standards that measure the quality of care provided by a provider.

Numerator

The number of providers who received treatment that complied with an ACO quality measure (numerator).

Denominator

The total number of providers whose claims data qualified them for an ACO quality measure.

How it Works

Claims Data is Compared to Measures

KentuckyOne Health Partners processes claims data within the data warehouse and compares it against each measure's criteria.

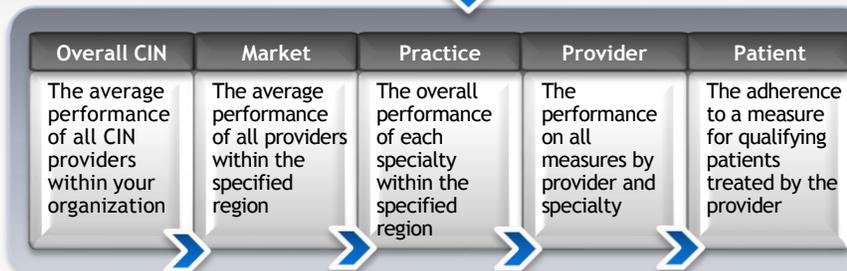

Provider Performance is Calculated

KentuckyOne Health Partners calculates provider performance at the provider level for your population which we then use to measure performance trends.

Performance Data is Organized into Different Levels

Provider performance data is then organized into a hierarchy as illustrated to the right that allows you to view metrics from a high level all the way down to the patient level.

WHAT CAN I USE IT FOR?

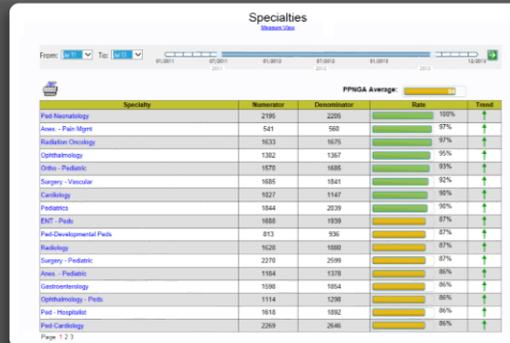

View the Overall Performance of KentuckyOne Health Partners

Upon first logging into the Physician Performance Dashboard, you are able to see a high level overview of your entire ACO's performance. From here, you can drill down into market performance, practice and provider performance. Only the provider can drill down directly to attributed patient performance.

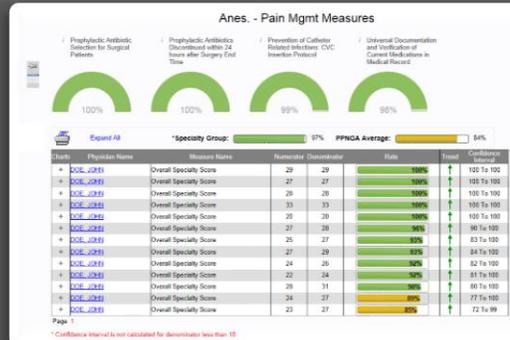

View the Performance of Each Region within KentuckyOne Health Partners

When drilling down into a region within the dashboard, the application provides you with a list of each of its practicing provider practices along with their overall performance rating. This page allows you to identify trends throughout the region as well as how many patients received compliant treatment vs. the entire region's population.

View Each Provider's Performance within the Region and Practice

The Physician Performance Dashboard provides the region's average performance for each measure. Then from the practice level, you can view overall performance scores of your practice to identify areas of improvement. Once you drill down to your quality data scores, you and only you, can drill down to the patient level.

View Your Quality Compliance for Your Included Population

After identifying a quality measure for which you would like to view more detailed information, you can drill down to the patient level to identify data captured by the system. This page provides you with detailed information about whether the patient care is meeting the quality measure or may need to change in order to meet the quality measure.
